

Home Asset Inventory (Completed Assignment) by Jordan Butler

Asset	Network Access	Owner	Location	Notes	Sensitivity
Smartphone (Owner's)	Always connected via Wi-Fi	Jordan Butler	Home office desk	Contains business emails, authentication apps, and client communications	Confidential
Smart TV	Occasionally connected via Wi-Fi	Household	Living room	May be vulnerable to exploits via outdated firmware or unsecured apps	Low
External Hard Drive	Connected occasionally via USB or Wi-Fi	Jordan Butler	Locked drawer in office	Stores client data, backups of financial records, and business reports	Confidential

Explanation of Choices

- **Smartphone (Owner's):** This is a critical endpoint, likely tied to multi-factor authentication, emails, and business platforms. It poses a high risk if compromised, so it's classified as *Confidential*.
- **Smart TV:** Limited exposure to business information, but still connected to the network. Risk is low, but firmware should be kept updated. It's classified as *Low* sensitivity.
- **External Hard Drive:** Holds sensitive business backups and possibly client PII (Personally Identifiable Information). Physical access is controlled, but the data it holds makes it *Confidential*.
